Installation profiles

In Drupal it is possible to build installation profiles.

All OS2 web applications, made in Drupal - for OS2, should have a custom installation profile. This installation profile should guide the user through the system installation and collect all nessesary information needed for the system to run "out of the box".

For example OS2dagsorden is a web application. OS2webCore is not. OS2webCore is a component library for components that are used in many web applications.
